

Class: II Subject: Science Chapter: 1 Topic: (Climbers and Creepers) Week: 2 Day 2 Date:

Students' Learning Outcomes (SLOs)	Methodology	Time	Resources	Assessment
By the end of the lesson, students would have:	Introduction: - Inform the students that today we are going to learn about the different types of plants (climbers and creepers). Engage: - To grab the interest of the students, show them the pictures given in the 'Resources' - Ask them the difference between these plants. - Explain that plants which grow and cover a lot of the ground are called creepers and the plants that need support to grow straight are called climbers. Explore: - Divide the class into group of 5. - Ask each group to remember the visit of school garden where they identified the different types plants including climbers and creepers. - Ask group one to write the features and examples of creepers in bullets form (week plants, grow without support, need large area) on their drafting pad. - Ask group two write the features and examples of climbers in bullets form (soft stem need support, no large area is required). - Ask one student from each group to present their findings in the class. Explain: - Tell the students to read the textbook pg. 9 (Creepers and Climbers) and generate a discussion about these types of plants. Elaborate: - Show students a video: Types of Plants Science Grade 1 & 2 TutWay (from 2min 39sec to 4min 9sec). - Ask the following questions:	60min	    Drafting pad Video: Types of Plants Science Grade 1 & 2 TutWay (from 2min 39sec to 4min 9sec). https://youtu.be/GPIIu22UPBE	Students will be assessed on: explored the different types of plants (creepers and climbers)
